

HYDRAULIC COMPRESSION HEAD

Model No. **EP-60S** 60Ton output compression head

EP-60S Compression Head

HPE-1A Recommended hydraulic pump

SPECIFICATIONS

Ram stroke: 38.5mm
between dies.

Oil volume required:
303cc

Force at die face: 517kN

SIZE

146mm Dia. x 450 (H)
mm

WEIGHT

22.0 kg

ACCESSORIES

Steel Carrying case

Ground Stand

REMARKS

Dies are sold separately.

Light Weight

Removable die cap for easy
connector positioning.

Simple compact design for
easy maintenance.

HPE-1A Engine driven
hydraulic pump is
recommended for use with
this compression head.

FEATURES

The EP-60S is a 60ton
output compression head
for full tension ,
transmission line
connectors and requires
and external single acting
700bar pumping source.

Single acting means
hydraulically advancing
the ram to build the
tonnage and spring
retraction of the ram.

Please specify the dia. of
the manufacturers
connectors or Alcan die
no. ie A-9, A-10 etc, with
order.
